Agenda

- Where are your business rules?
- Where rules engines add value
- How rules engines fit in modern enterprise architectures
- Case study
- What to look for when selecting a Business Rules Engine

Facts about Business Rules Engines

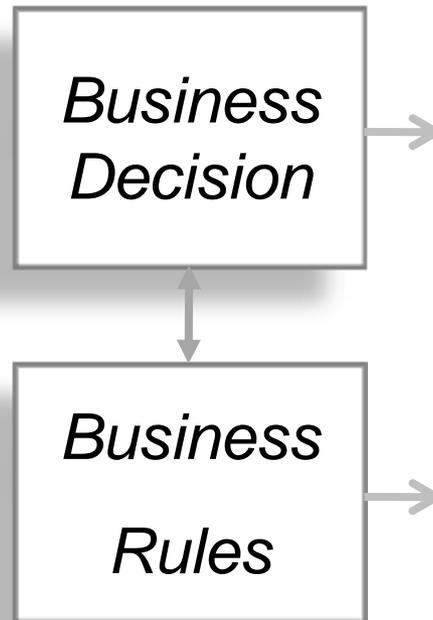

- A **Business Rules Engine** is a central repository of the business rules or logic that is maintained outside of other components of a computer program.
- **Business Rules Engines** are components of business applications. System Integrators and Solution Providers use Business Rules Engines as components of their solutions.
- Stand-Alone Commercially available Off the Shelf (COTS) **Business Rules Engines** are used by subject matter experts to define policy.
- **Business Rules Engines** must be easy to use by non-technical people and automatically check for business rule accuracy and integrity.
- **Business Rules Engines** should be leveraged when the rules change often, when the rules are complex, and when there are multiple versions of the same rules.

Where Are Your Business Rules?

Where Are Your Business Rules?

*Implemented
By Systems*

```

MULTIPLY B BY B GIVING B-SQUARED.
MULTIPLY 4 BY A GIVING FOUR-A.
MULTIPLY FOUR-A BY C GIVING FOUR-A-C.
SUBTRACT FOUR-A-C FROM B-SQUARED GIVING RESULT-1.
COMPUTE RESULT-2 = RESULT-1 ** .5.
SUBTRACT B FROM RESULT-2 GIVING NUMERATOR.
MULTIPLY 2 BY A GIVING DENOMINATOR.
DIVIDE NUMERATOR BY DENOMINATOR GIVING X.
  
```

Monolithic Application

IT Efficiencies:

- **Manageability** – Manage and reuse rules across diverse applications
- **Simplification** – Reduce dependency on skilled programmers
- **Velocity** – Increase speed of development, deployment and maintenance
- **Integration** – Seamless integration with enterprise applications and development tools

Business Efficiencies:

- **Productivity** – Eliminate manual steps in business processes
- **Quality** – Consistently make the right decisions
- **Agility** – Change rules at the pace of the business
- **Transparency** – Logic is transparent to business
- **Compliant** – Complete audit trail for all control points

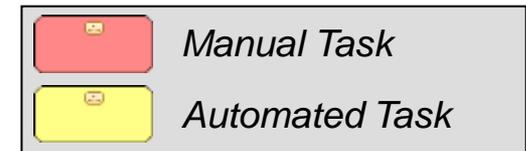

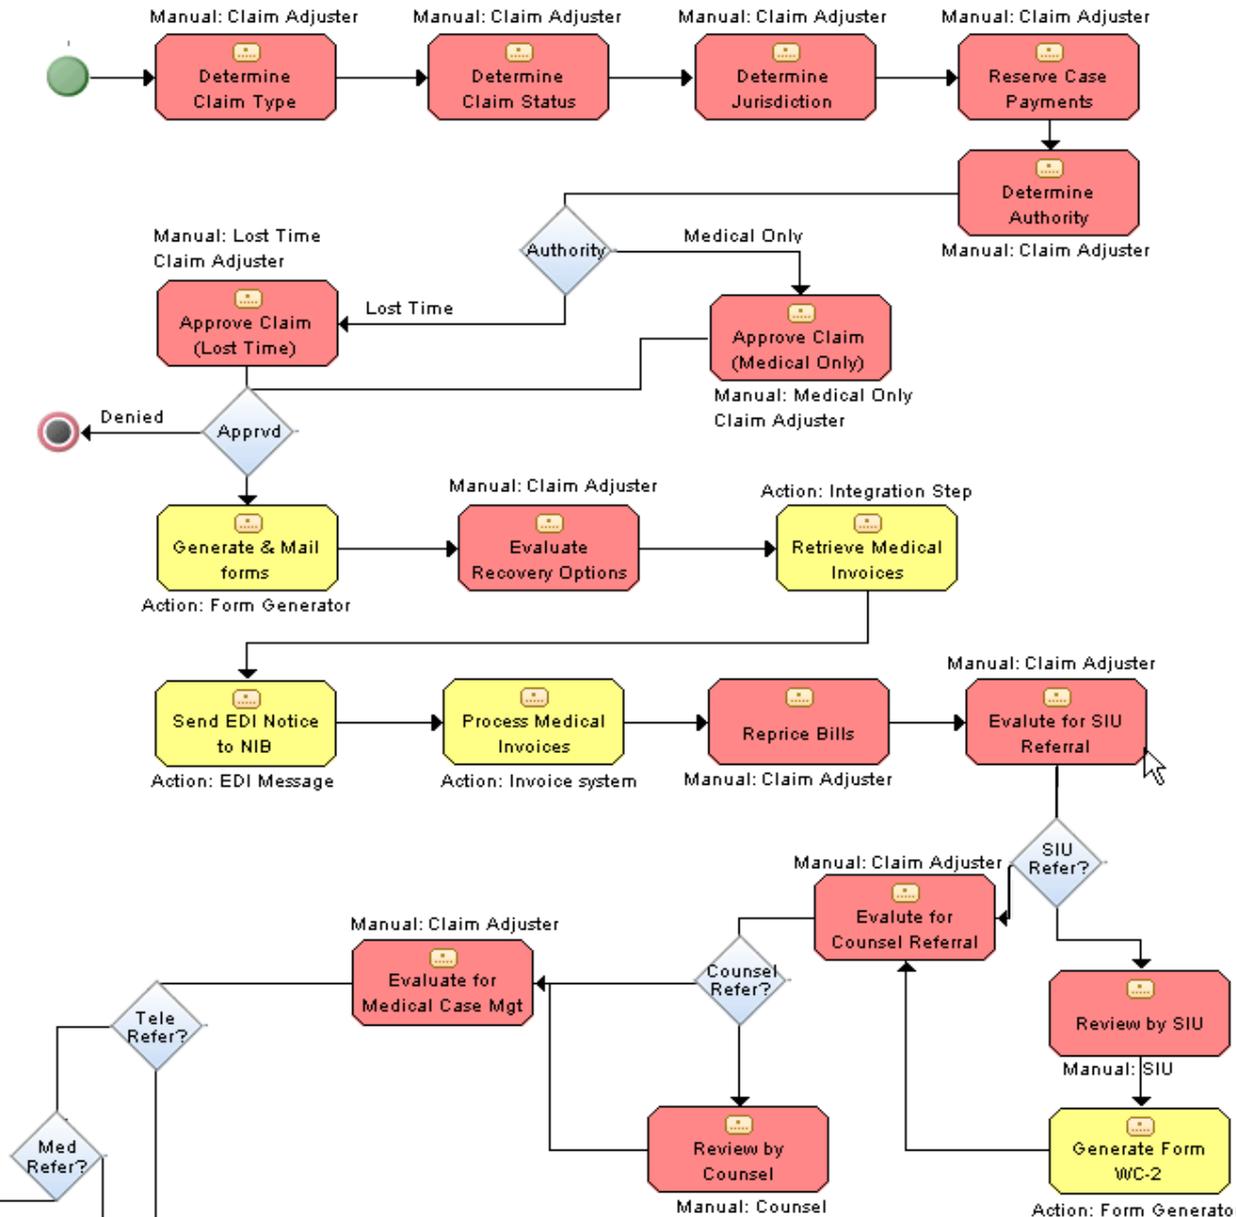

Corticon Case Study: Claims Adjudication

The Problem Today...

Claims is a complex, multi-step process.

- Many steps involve manual decision-making.
- Processing costs are high
- Mistakes are rampant
- Change requires retraining

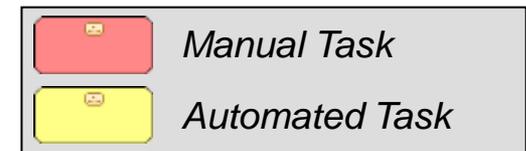

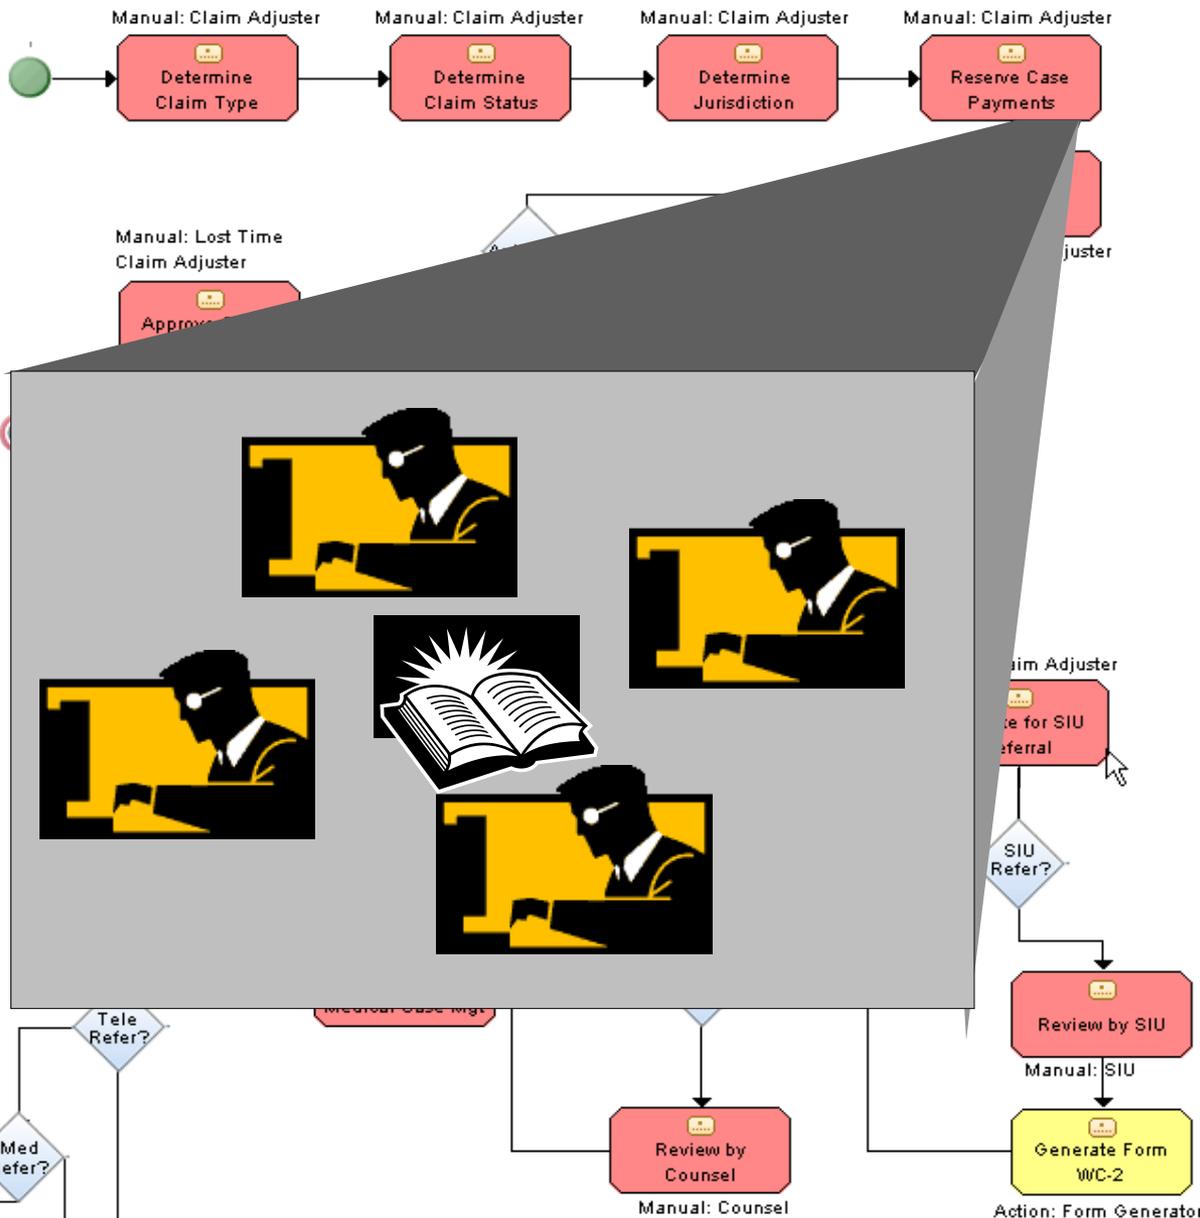

Case Study: Claims Adjudication (Workers Comp)

The Problem Today...

Claims is a complex, multi-step process.

- Many steps involve manual decision-making.
- Processing costs are high
- Mistakes are rampant
- Change requires retraining

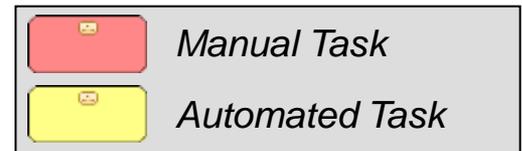

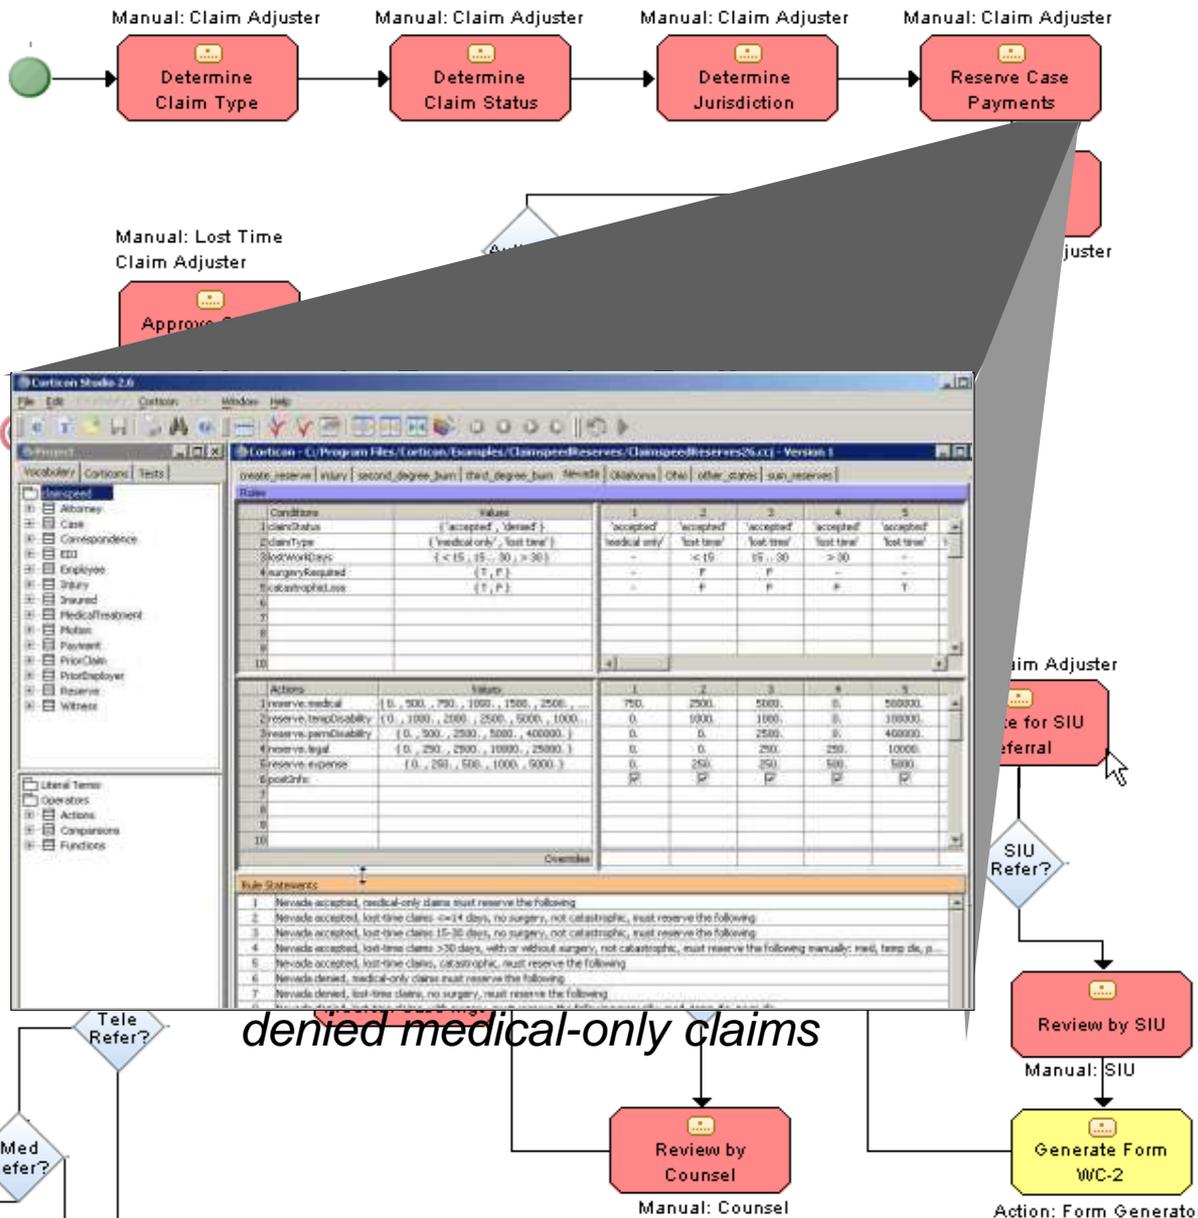

Case Study: Claims Adjudication (Workers Comp)

The Solution...

Corticon transforms the process:

- 1) Identify Decision-Making Steps
- 2) Capture Rules in Corticon Studio
- 3) Deploy to Corticon Server
- 4) Integrate into Process

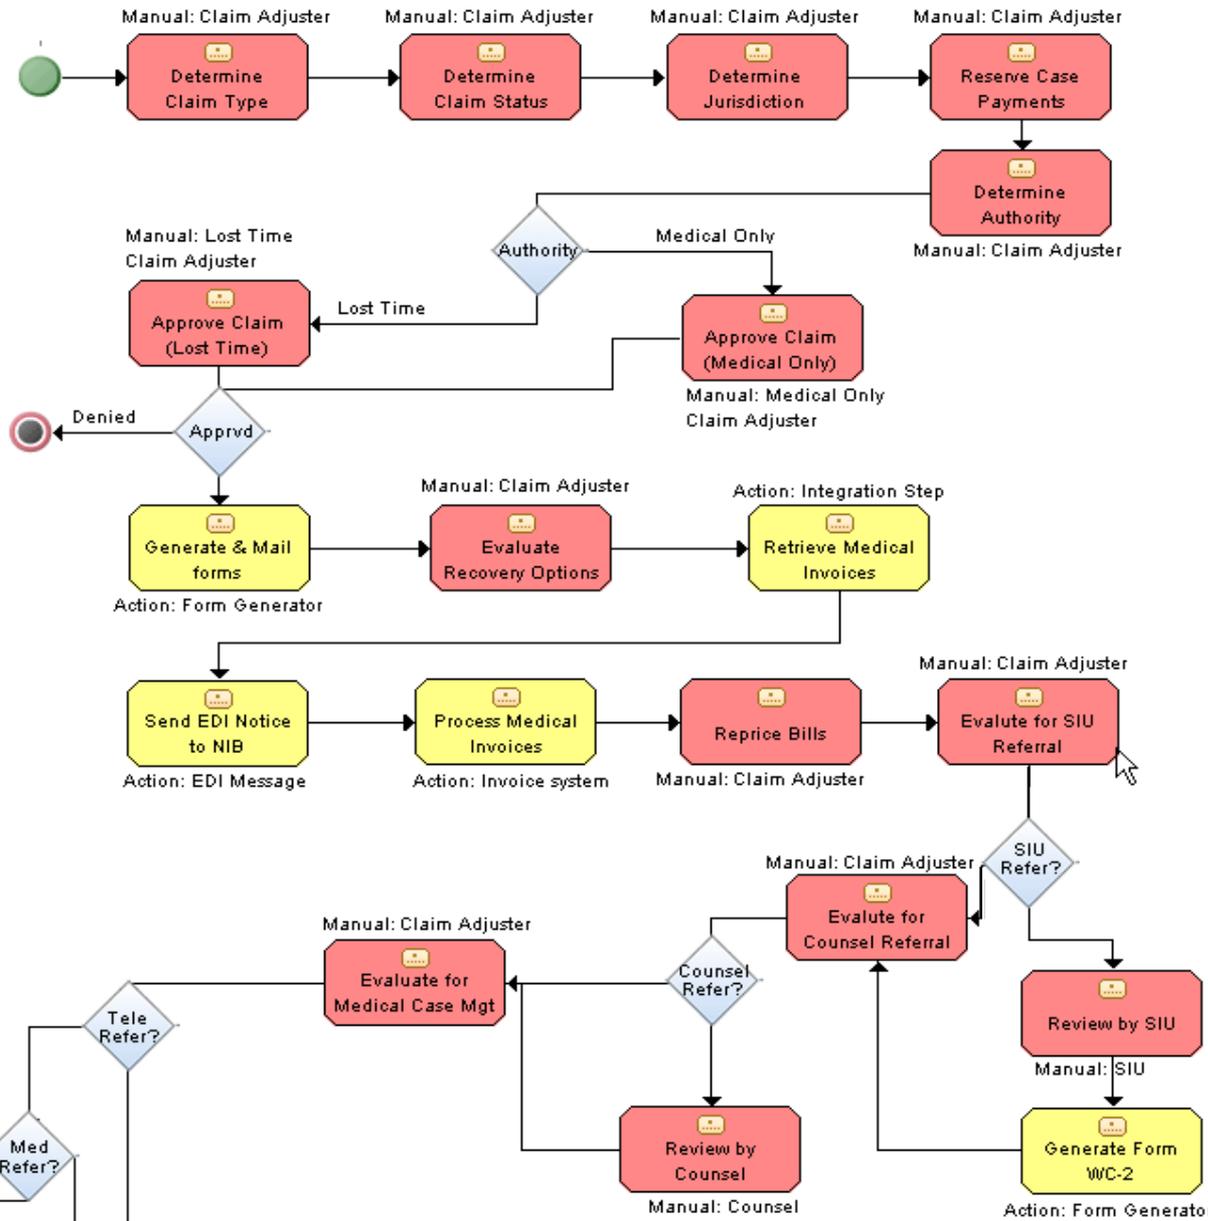

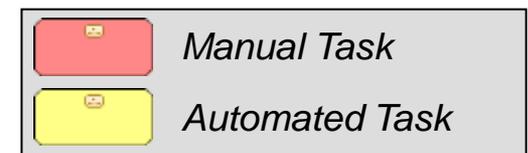

Case Study: Claims Adjudication (Workers Comp)

The Solution...

Corticon transforms the process:

- 1) *Identify Decision-Making Steps*
- 2) *Capture Rules in Corticon Studio*
- 3) *Deploy to Corticon Server*
- 4) *Integrate into Process*

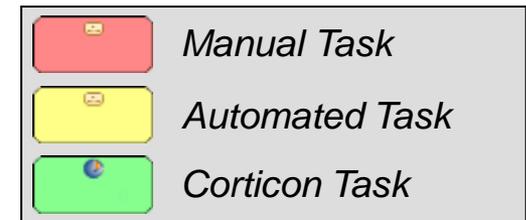

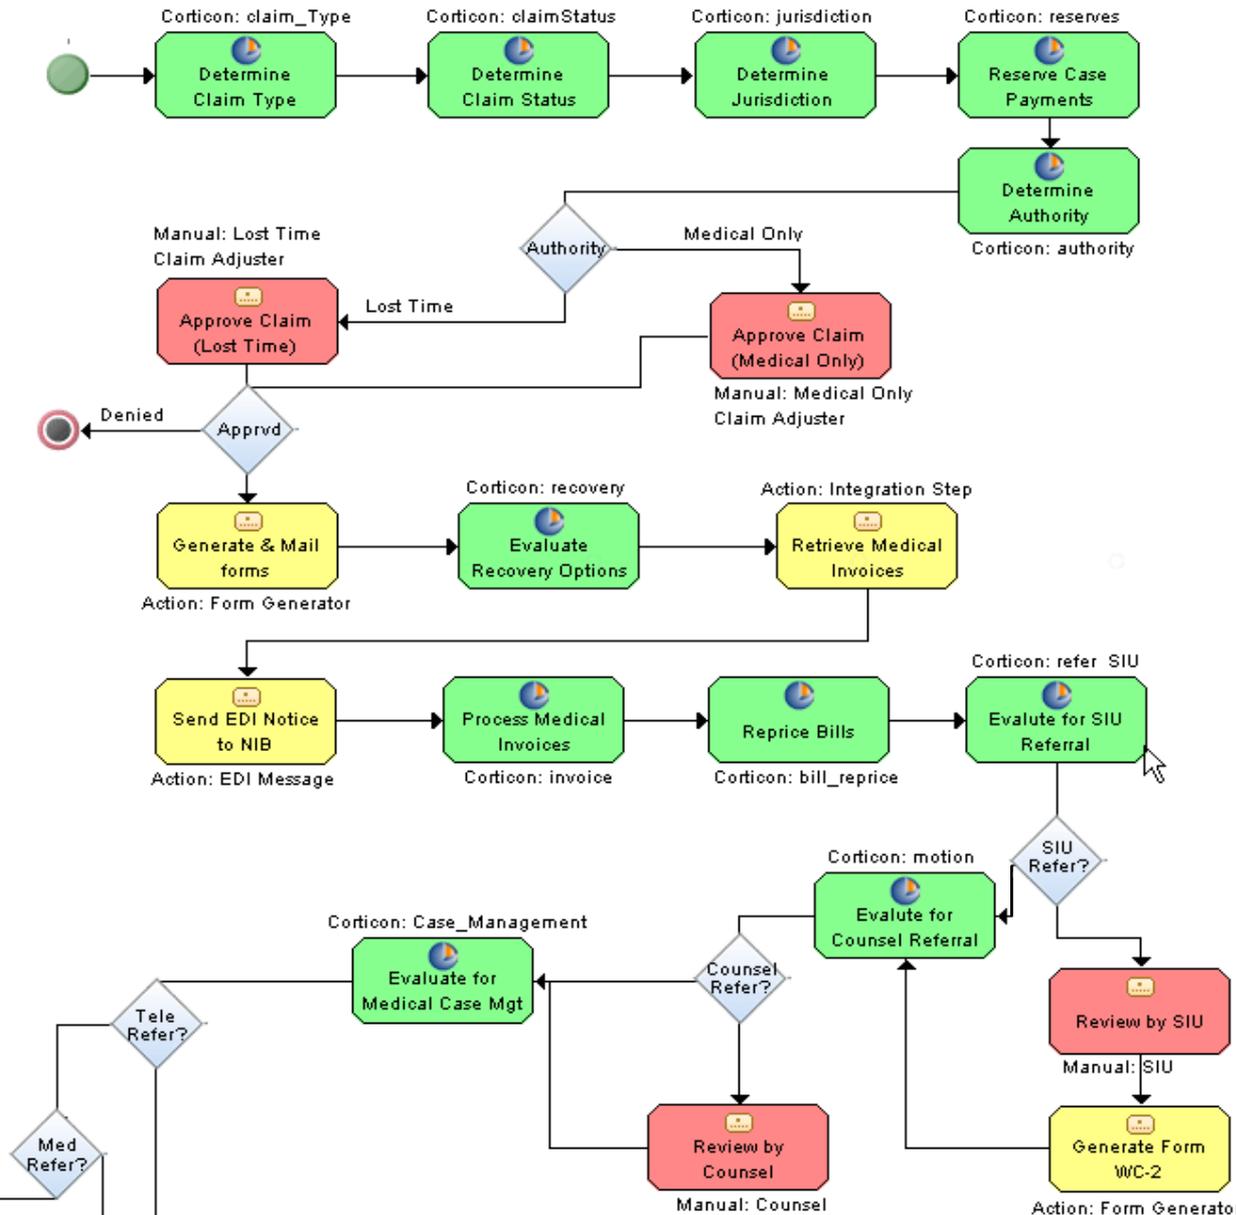

Case Study: Claims Adjudication (Workers Comp)

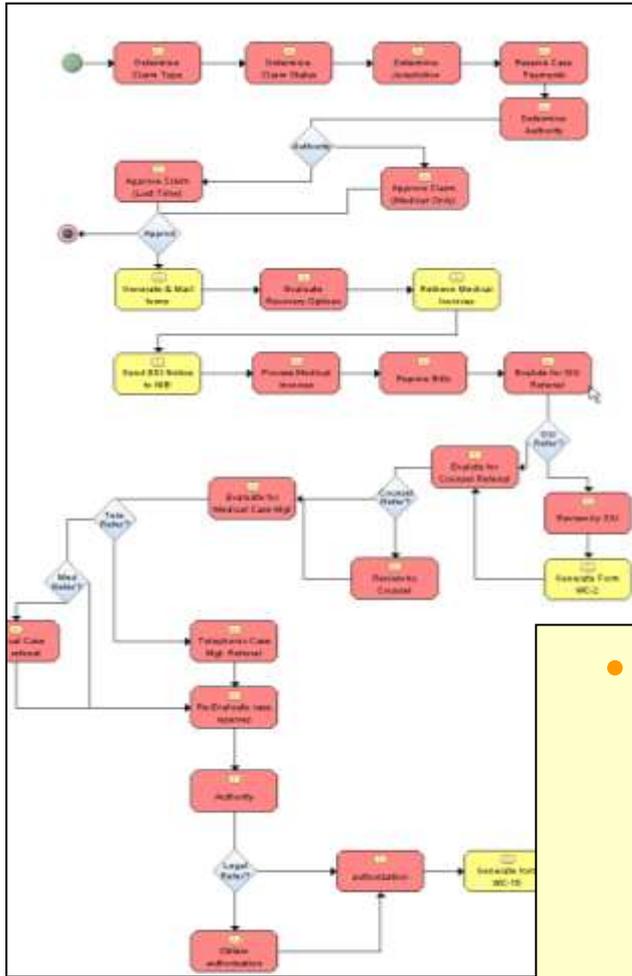

The Result...

Significant ROI is achieved!

- Processing costs reduced 50%
- Claims leakage reduced 20%
- Change cycles reduced 90%

How Business Rules Software Can Help

Before

Corticon

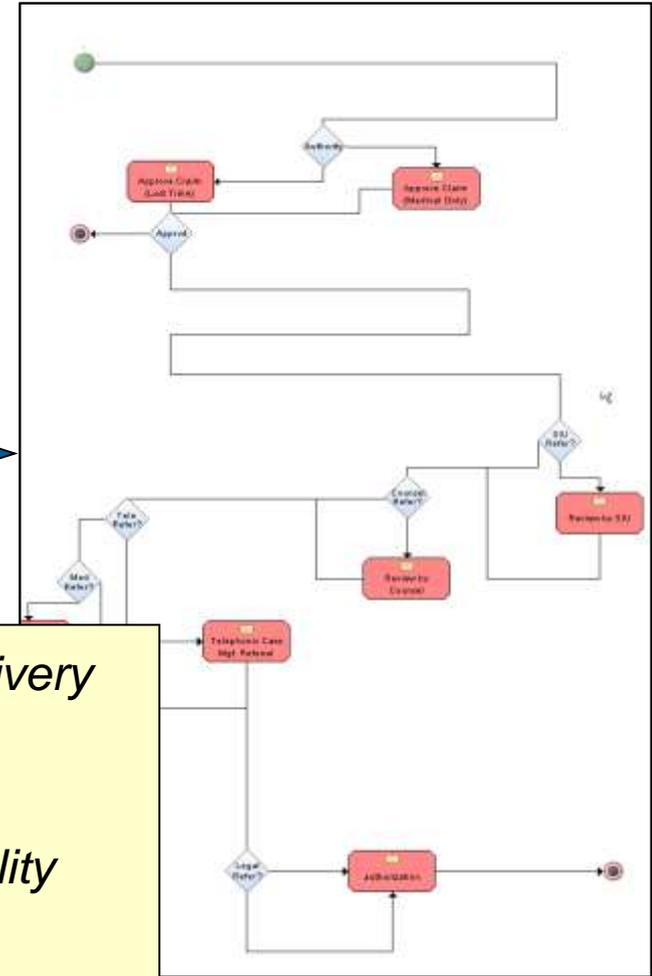

- 21 Manual Steps

After

Corticon

- 7 Manual Steps

- Accelerate Service Delivery
- Reduce Costs
- Improve Service Quality
- Improve Agility

Automating Business Rules – The Problem

Traditional approach is programming based

- *Simple rules difficult to automate, sophisticated ones impossible*
- *Single change can impact hundreds of rules/processes*

THERE IS A BETTER WAY...

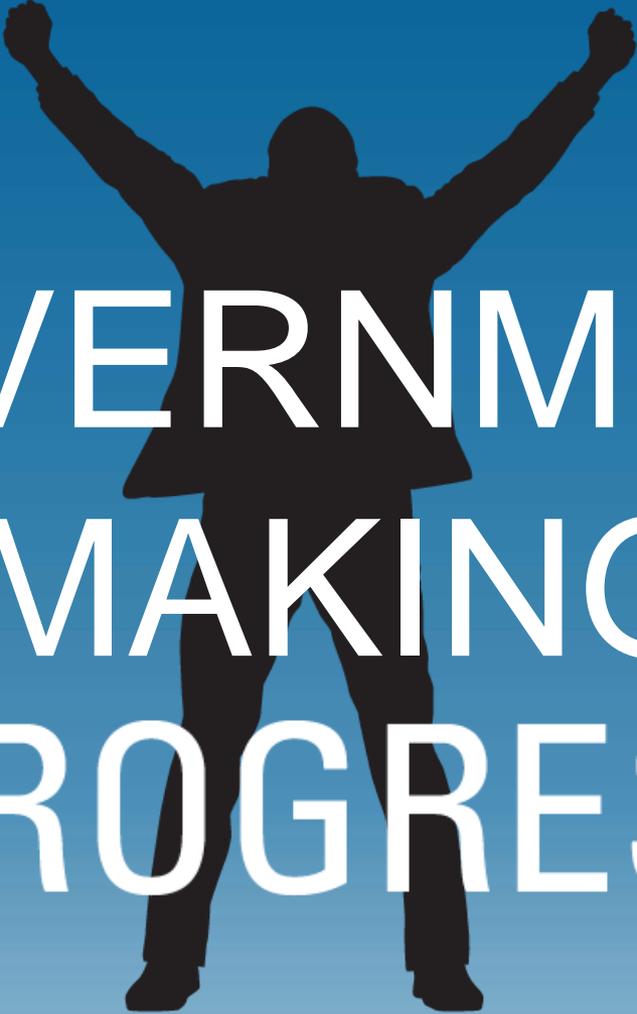

Key Requirements for Selecting a Business Rules Engine

- Easy to use by subject matter experts and technical people.
 - All rules and business logic (artifacts) in a single place
 - Easily understandable
- Provides automated features to ensure quality
 - Business rule integrity checking features
 - Integrated unit testing capability
- Provides robust 'decision versioning'
- Provides corporate IT governance
- Multi-platform and multi-integration support
 - Java, .NET, Web services
 - Database access
- Performance and Scalability
